

# Kyocera Module Early Adopter Developer Program

*Accelerate your Kyocera Wireless Module Machine to Machine (M2M) development and testing process with three month free developer access to the M2M network provided by Aeris Communications.*

Kyocera and Aeris have launched the joint **Kyocera Module Early Adopter Program** to accelerate the delivery of your applications. This program provides access to the Aeris North American CDMA network without charge during your application development period and includes VPN connectivity to the Aeris network, access to Aeris M2M expertise, and registration to the Aeris customer portal, AerPort™.

The **Kyocera Module Early Adopter Program** allows your development team to utilize the advanced new **Kyocera Module's** features operating on the Aeris network. Aeris provides "super carrier" capabilities that overlay North America's wireless networks and offers the only carrier service developed exclusively to deliver Machine-to-Machine (M2M) communications. Developers utilizing AerPort have web-based access to development documentation, device/traffic management tools, and Aeris support.

## Steps:

1. Order from Kyocera (contact information below) a New Module Development Kit **pre-activated** for the Aeris Network.
2. Aeris contacts developer for the sign-up process.
3. Aeris establishes VPN connectivity within 48 hours.
4. Aeris provides web-based AerPort Quick Start training (two hours) via web & phone.
5. Developer is now ready to test their application live on the Aeris network.

## Terms:

- Three months free Aeris CDMA network access, airtime and AerPort subscription with up to 10 MB 1xRTT data usage, 200 SMSDirect™<sup>(1)</sup> messages, and 200 MicroBurst®<sup>(2)</sup> messages.
- Network utilization exceeding the above parameters are charged using the Kyocera Module Developer Rate Plan.
- This is a limited time offer. Kyocera New Module Development Kit must be purchased from Kyocera Wireless before January 1, 2009 to participate in this program.
- Contact Aeris for voice capabilities or any other additional services.

(1) Aeris's network optimized SMS service that provides highly reliable, low latency messaging.

(2) Patented Aeris wireless service optimized to transmit short bursts of data in an extremely fast and reliable manner.
